MELTING AND REFINING DEPARTMENT,

Philadelphia, 6 Feb'y. — , 1884.

Sir,

It is with regret that I have to report that the Pulverised Charcoal supplied by J. R. Rowand is so light that it becomes necessary to purchase elsewhere unless he will at once change the quality. I object to his supplies of this Charcoal; 1. because we have more than once waited for it through the Winter, and been obliged to make an imperfect substitute for it ourselves: 2. because the greater part, we have latterly received, has been so soft and light, that a great deal of it is dissipated, when thrown on the metal, & ceases to cover it well, and ^{to} protect the metal from wasteful volatilization. 3. That this dissipation causes indisposition among the men, which never occurs when good charcoal is employed.

Mint of the United States at Philadelphia,

MELTING AND REFINING DEPARTMENT,

2

Philadelphia, _____, 188—

The charcoal is so light, that I am led to attribute it to the light charcoal of forests burned over, which can be obtained at a lower rate than good charcoal. Whatever the cause, the results are much to be deprecated, and I earnestly recommend that we procure good pulverised charcoal from M^r Charles Wright, who always supplied us with the best kind, at least for the present.

Very respectfully

J^{as} C Booth

[Abstract:] Complaints of the Pulverized charcoal furnished by John R. Rowand...

Mint of the United States at Philadelphia,
Melting and Refining Department,
Philadelphia,
February 6, 1884

Sir,

It is with regret that I have to report that the Pulverized Charcoal supplied by J. R. Rowand is so light that it becomes necessary to purchase elsewhere unless he will at once change the quality. I object to his supplies of this Charcoal; 1. because we have more than once waited for it through the Winter, and been obliged to make an imperfect substitute for it ourselves; 2. because the greater part, we have latterly received, has been so soft and light, that a great deal of it is dissipated, when thrown on the metal, & ceases to cover it well, and to protect the metal from wasteful volatilization. 3. That this dissipation causes indisposition among the men, which never occurs when good charcoal is employed.

The charcoal is so light, that I am led to attribute it to the light charcoal of forests burned over, which can be obtained at a lower rate than good charcoal. Whatever the cause, the results are much to be deprecated, and I earnestly recommend that we procure good pulverized charcoal from Mr. Charles Wright, who always supplied us with the best kind, at least for the present.

Very respectfully
